## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-15, 16-38, and 44-51, drawn to the optical device, classified in class 385, subclass 16.
  - II. Claims 39-43, drawn to the method of fabrication an optical device, classified in class 359, subclass 247.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions in Group I and Group II are related as process of making and product made.

The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the optical device of Group I can be constructed from the magnetic materials and magnetic fields can be utilized to move the optical device of Group I.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Art Unit: 2882

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

6. **This application contains claims directed to the following patentably distinct species of the claimed invention:**

**In the event that the applicant elects Group I, a further election of species as set forth below is required:**

This application contains claims directed to the following patentably distinct species of the claimed invention:

Species 1: Claims 1-15. The subject matter that is the patentably distinct species in Claims 1-15 is the optical device that has a flexure for angular offsets.

Species 2: Claims 16-38 and 44-51. The subject matter that is the patentably distinct species in Claims 16-38 and 44-51 is the optical device that has a flexure for thermal distortions.

7. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed. None of the claims are considered generic.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Art Unit: 2882

8. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

9. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
